

Panel A — Corrected: PEP Efficacy with U=U-Respecting Framing
Parenteral (no U=U floor) vs Mucosal (PARTNER2 floor at VL<200)

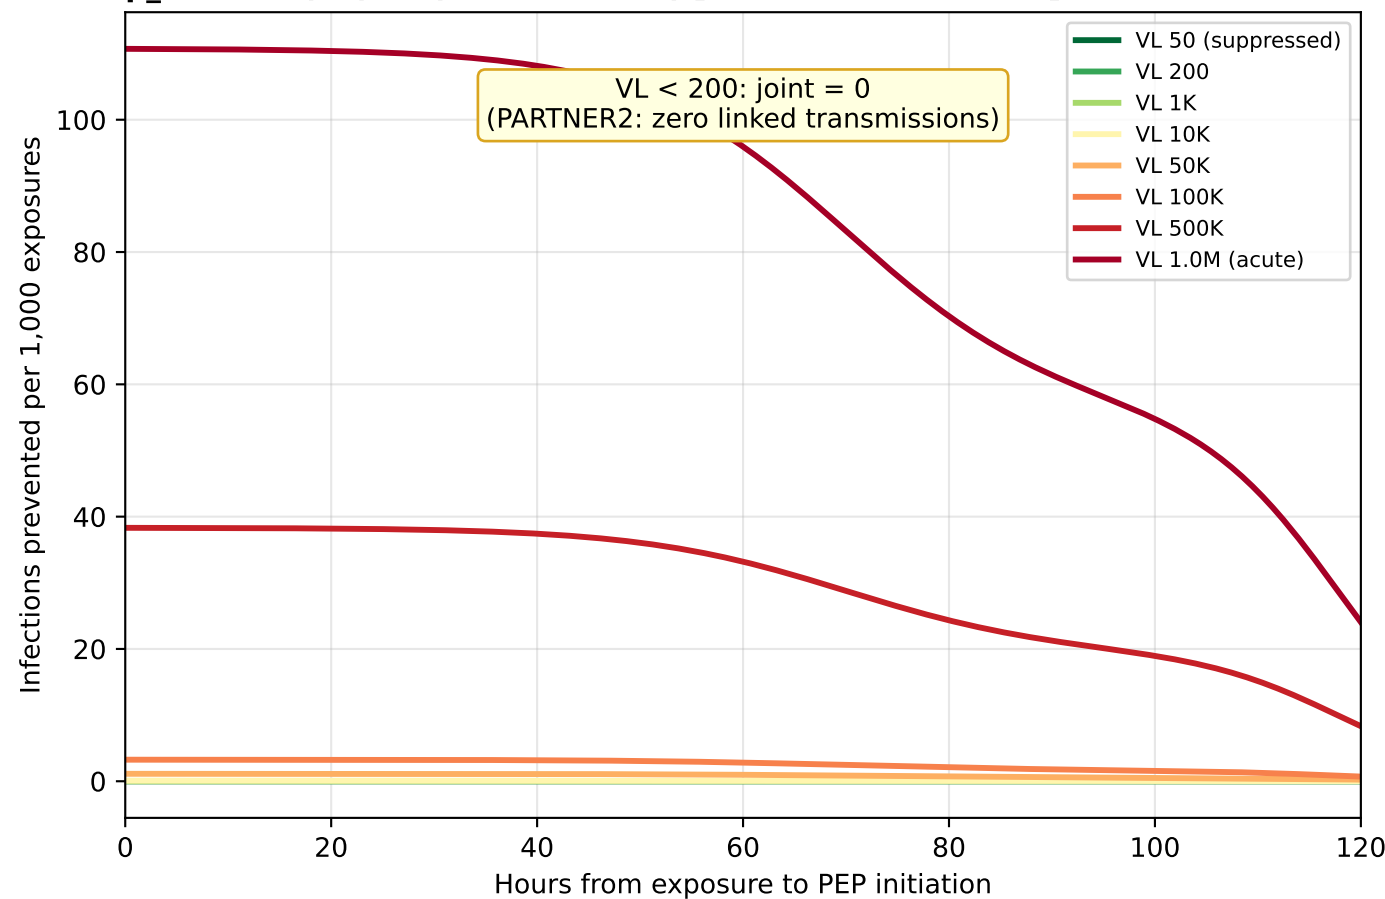

A. Parenteral — conditional efficacy
P(PEP succeeds | transmission occurred)

B. Parenteral — joint absolute prevention
 $p_{\text{transmit}}(\text{VL}) \times P(\text{PEP succeeds})$ [no U=U floor]

C. Mucosal (receptive vaginal) — joint prevention
 $p_{\text{transmit}}(\text{VL}) \times P(\text{PEP succeeds})$ [U=U floor at VL<200]

D. Asymmetry at VL=50 (suppressed)
Sexual = 0 (U=U). Parenteral != 0 (gap in evidence).
